

# Environmental Charter

Our continued existence depends on tackling the climate crisis in the most effective and efficient way possible. Humankind urgently needs to achieve net zero for carbon dioxide and all other greenhouse gas emissions.

At Reaction Engines, we are passionate about using our transformative technology to accelerate sustainability improvements in existing systems and to enable new net zero products.

We are committed to understanding, assessing and rapidly improving the footprint of our operations. This is fundamental as we grow our business to deliver its innovative, sustainable technologies.

We know that we can make a bigger difference as a community. We are actively sharing ideas, inspiration and developing initiatives where we can band together to achieve more. Whilst the scale of this challenge can feel daunting, we are resolved to make a difference through our products, our operations and our actions.
